The S&P/ASX200 closed down 16 points to 5460.8 on light volume worth \$3.2 billion. There were 449 issues higher and 498 down. The SPI Futures closed down 4 points to 5455 on average volume of 20,198 contracts. Aussie 10 year bond yields were down 2 points to 3.81%. The \$A is at 93.61US c, down about 10 points on last evening.

*The banks contributed 10.8 negative points to the index, insurers contributed 1.2 negative points, resources contributed 5 negative points, **property** trusts contributed 0.1 positive points, retailers contributed 0.4 negative points and Telstra was Neutral.

*Over the week the S&P/ASX200 was up just 2.7 points.

*At 4pm AEST the Nikkei Dow futures was up 80 points to 14,220 points, Shanghai CSI physical was down 5.8 points to 2009.48 points, Hang Seng futures was up 5 points to 21,632 points, S&P futures was down 0.6 points to 1871.70, Nasdaq futures was down 0.5 points to 3537 points, Dow futures was down 12 points to 16,498 points. Gold futures was up \$4 to \$1293. Crude futures was up 17c to \$100.43.

(Our thought only: **gold** may receive some support in the Asian day from physical buying by India - marriage season now in full swing).

*China April CPI rose 1.8%, below expectations.

China's annual consumer inflation rose 1.8 percent in April, slower than March's 2.4 percent rise, data on Friday showed. The reading was below expectations for a 2 percent rise in a Reuters poll. On a month-on-month basis CPI fell 0.3 percent, below expectations for a 0.1 percent decline. "It seems China is catching a whiff of that deflationary problem," Yao Wei, China economist at Societe Generale told CNBC.

"For an economy with a nominal GDP (gross domestic product) growing at 8 percent, this is an extremely low level of inflation, or rather deflation actually. It seems that all these corrections that China needs to work on its debt are having an impact on the economy and we think its going to last, the low inflation or PPI (producer price) deflation," she added

China's PPI fell 2% year on year in April vs a 1.8% fall expected in a Reuters poll.

Light volumes allowed the market to swing down more than 30 points early before halving the number at the close while most investors sat on the sidelines ahead of the Budget next Tuesday.

China's eco numbers today were barely different to expectations and failed to move the market.

"I'll call the market down 5"

"Bernborough" said, "A lot will depend on **China**'s economic data today, but I think we will struggle to go up. I think we will wait for next week's Budget.

"There is no doubt in the world that people have been taking a bit off the top. There is more trading - the super funds are trading more than they did, including around stocks paying dividends.

"I'll call the market down 5".

The S&P/ASX200 closed up 41 points to 5476.8 last evening.

RBA STATEMENT

CPI expectation now down from 3% year on year to 2.3/4 % and 2.5% for end 2014 down from 2.3/4%.

GDP growth also lowered by a quarter percent to 3% for mid 2014, and for 2015 down 0.25% to 2.3/4% below trend.

"Growth of Australia's major trading partners looks to have moderated a little in the March quarter, but indicators are consistent with the pace of growth remaining around average this year. There are some signs that the recent slowing in **China** may be temporary and the **Chinese** authorities have indicated a willingness to support investment growth, if needed, to achieve their target for output growth. In Japan, economic activity appears to have picked up as expected in the March quarter, ahead of the increase in the consumption tax in April, and this has been followed by a decline in some measures of activity. It remains to be seen whether the planned fiscal stimulus measures will be sufficient to offset the anticipated decline in household expenditure.

"Other east Asian economies appear to have been growing at around their decade-average pace. The US economy is showing signs of moderate growth, notwithstanding a slowdown in the early part of the year attributable, in large part, to adverse weather.

"Global inflation remains low, particularly in the advanced economies, while monetary policy is highly accommodative in most economies. The outlook for Australia's trading partner growth is little changed since the February Statement. With the moderation in trading partner growth in the first quarter expected to be temporary, growth of Australia's trading partners in year-average terms is forecast to be around its long-run average in 2014 and 2015.

"Commodity prices overall have declined over the past three months. Notable falls in the prices of **iron ore** and **coal** reflect a moderation in the demand for steel in **China**, some tightening of credit affecting the steel sector there, and continued expansion of the global supply of bulk commodities.

"Commodity prices, and hence the terms of trade, are expected to be a bit lower over coming years owing to the increased supply of bulk commodities following the significant investment in capacity. However, the demand for bulk commodities is expected to remain strong and bulk commodity prices are generally expected to remain well above their levels of recent decades.

Conditions in financial markets have been remarkably stable in the past few months, with historically low volatility evident in many asset classes. The US Federal Reserve has further pared back its program of asset **purchases**. The Bank of Japan has continued its pace of asset **purchases**, while the European Central Bank has expressed a preparedness to use additional measures if the medium-term outlook for inflation softens or financial conditions tighten.

"There has been an increase in investors' appetite for risk with global **equity** prices reversing the falls recorded in January, demand for corporate **bonds** remaining strong and yields on sovereign **bonds** of several euro area periphery economies declining to multi-year lows. Conditions in many emerging markets have also improved, with their bond yields generally declining, **equity** markets rising and their currencies appreciating, reversing much of the movements seen in the second half of last year.

"Australian financial markets have followed the lead of international markets over recent months."

Equity prices have increased, while bond yields and spreads have declined or remained at relatively low levels. Domestic financing conditions remain very accommodative, with ongoing expansion in marketbased financing, while growth in business credit has picked up and housing credit growth has stabilised at a rate that is a little faster than income growth.

The Australian dollar has appreciated by around 4 per cent since the February Statement, supported in part by domestic economic data being a little stronger than markets had expected. This has taken the exchange rate back to levels seen late last year, though it is still about 10 per cent lower than the peak seen earlier in 2013.

In Australia, overall economic activity picked up over the past six months with the economy looking like it grew at close to its long-run average pace over this period. Much of this improvement was accounted for by a surge in resource exports, although there are also some signs of better conditions in parts of the non-mining economy. Still, non-mining investment remains subdued, as businesses are reluctant to take on significant new projects. Also, mining investment will decline substantially over the coming years, and growth in public demand is expected to be subdued owing to planned fiscal consolidation at state and federal levels. The still high level of mining investment has added to capacity in the resources sector and helped to underpin the particularly strong growth of resource exports over the past two quarters. Further capacity for bulk commodities is still coming on line, although this will likely be at a slower rate than of late. Meanwhile, mining investment will decline substantially over the coming years as more resource projects reach completion and few new projects commence construction in the near term. This decline will subtract significantly from economic activity, although it will also see a substantial reduction in capital imports.

Non-mining investment is estimated to have declined in the December quarter and remains low as a share of GDP. While this was consistent with survey measures of business conditions being below average through much of 2013, a number of those surveys suggest that conditions have lifted to around their average levels since mid last year.

Nevertheless, firms continue to report through the Bank's liaison program that they are waiting to see a sustained pick-up in demand before committing to I ncreasing capital expenditure.

Household consumption growth picked up through 2013 as households became more optimistic about their finances, helped by low interest rates and the strength in the housing market. Over the past year, income growth was slower than that of consumption, with the saving rate declining a little.

A moderate pace of growth in consumption appears to have been sustained into early 2014.

The strength in the established housing market, with rapid price growth over 2013 and rising housing turnover, not only provided an impetus to consumption but has also provided the backdrop for a much anticipated pick-up in dwelling investment.

Dwelling approvals remain at high levels, and recent data on commencements point to strong growth in dwelling construction in the first half of 2014.

Nationwide housing price inflation has moderated a little in recent months from the earlier rapid pace, auction clearance rates have also declined from recent high rates and loan approvals have been stable for a few months. It remains to be seen whether these signs of a tempering of conditions represent a shift to a more sustainable growth rate for housing prices. At the same time, indicators of demand for new housing remain strong, including first home owner grants and loan approvals for new dwellings.

Labour market conditions have shown some signs of improvement over recent months, consistent with the earlier improvement in economic activity.

Employment growth picked up in the early months of 2014, following subdued growth over 2013. The unemployment rate has not increased over the past few months in contrast to the gradual upward trend of the previous year and a half. The participation rate also appears to have stabilised. Despite the

improvement in conditions, there remains a fair degree of spare capacity in the labour market. This has seen the growth of wages remain low, with most measures of wages recording their slowest pace of growth for a decade or more. The combination of slow wage growth and productivity growth a little above the average of the past decade resulted in very little growth in unit labour costs over 2013.

The slow growth of wages is now more clearly evident in lower rates of inflation for a range of consumer prices. This is especially so in the prices of market services, which tend to be relatively responsive to changes in labour costs. Inflation in the prices of those non-tradable items for which prices are regulated or

the government is a significant provider have been running at a faster pace. Historically the prices of these items have been less sensitive to changes in domestic labour costs.

Overall though, non-tradables inflation has slowed over the past year to around 3 per cent, well below the average rate of nearly 4 per cent over the past decade. Inflation in the prices of tradable items, in contrast, has been running at a faster pace over the past year than in the preceding few years, consistent with the depreciation of the exchange rate since early 2013.

The various measures suggest that underlying inflation was ½ per cent in the March quarter, noticeably lower than the December quarter's teady at reading. These data appear to overstate the change in inflationary pressures in recent quarters and in this regard it is likely that the past two quarters of inflation data have reflected an element of noise.

Abstracting from this volatility by looking at the various measures in year-ended terms suggests that underlying inflation is running at a pace of around 2½ to 2¾ per cent. CPI inflation was a little higher than this, in part reflecting the rise in the tobacco excise in December.

The outlook for the domestic economy is little changed from that presented in the February Statement. Growth is expected to be a bit below trend pace over the next year or so, reflecting the decline in **mining** investment and weak public demand, offset to some extent by the support being provided to domestic demand by very low interest rates. This support is already evident in the recent strength in indicators of dwelling investment, as well as some pick-up in the pace of consumption growth".

As household demand picks up, businesses are expected to increase their investment given growth in the non-mining capital stock in recent years has been well below average. The depreciation of the exchange rate over the past year is also expected to make a contribution to a pick-up in activity in the traded sector, albeit to a slightly lesser extent than was anticipated in February given the appreciation of the exchange rate since then. The combination of these forces is expected to see growth increase gradually to an above-trend pace over 2015/16.

The unemployment rate is unlikely to decline consistently for some time. Forward-looking indicators of labour demand have improved recently, but they are still at low levels, consistent with relatively moderate growth of employment in coming months. With GDP growth forecast to be at a below-trend pace for the next year or so, the unemployment rate is not expected to begin to decline in a sustained fashion until after this, and then only slowly.

Inflation is forecast to remain consistent with the inflation target. The outlook for inflation reflects the influence of two opposing forces. There is expected to continue to be a fair degree of spare capacity in both product and labour markets, which is likely to contain profit margins and lead to moderate growth

of labour costs. Working in the other direction is the impetus to tradables prices coming from the depreciation of the exchange rate since early 2013.

Overall, the forecast for inflation is little changed from the previous Statement.

For most of Australia's major trading partners, the uncertainty surrounding the forecasts for growth appears broadly balanced. Notably, **Chinese** growth slowed in the first quarter of 2014, as it did in each of the past two years. But in both of those years growth picked up later in the year, in part because of government actions but potentially also reflecting a changing seasonal pattern. **Chinese** officials have recently announced an unchanged growth target for this year and emphasised the importance of stable growth to achieve job creation. In Japan, it is uncertain how the disruption to growth from the increase in the consumption tax rate will be balanced by the fiscal stimulus and the current stimulatory stance of monetary policy.

For the domestic economy, the key uncertainties surrounding the outlook relate to the balance of two key forces: the decline in **mining** investment and the pick-up in activity in the non-**mining** economy (which is being helped in large part by stimulatory monetary policy). The timing and strength of these remain subject to considerable uncertainty. Consequently, it could be that aggregate demand

will be weaker or stronger than expected over the next couple of years, with resulting implications for inflation. The path of the exchange rate also presents a significant source of uncertainty for the forecasts of both economic activity and inflation. With resource prices and therefore the terms of trade expected to decline further, historical relationships suggest that the exchange rate could move lower over time. The decline in capital inflows that have helped to fund **mining** investment, the increase in income payments to domestic and foreign owners accruing from strong growth in resource exports, as well as the conduct of monetary policy in major countries and associated capital flows, could also affect the exchange rate.

The cash rate has been at its current low level for some time now, resulting in very low levels of household and business borrowing rates. This stimulatory setting of monetary policy is having the expected effect. The housing market has been strong and a significant pick-up in dwelling investment is in prospect. Household consumption has also strengthened as have some measures of business conditions. While there have been signs of improvement in the labour market over recent months, a fair degree of spare capacity remains. Over the next couple of years, growth in activity is expected

to pick up gradually but it is likely to be some time before unemployment declines consistently. This should see domestic costs remaining contained, which will be necessary to help offset the ongoing effect on prices of the depreciation of the exchange rate over the past year. The balance of these forces on consumer prices is expected to see inflation remain consistent with the inflation target through the forecast period. Since last August, when the cash rate reached its current low level of 2.5 per cent, evidence of the effects of the substantial degree of stimulus already imparted has continued to accumulate.

same time, the economy continues to face some significant headwinds, with the large decline in resources sector capital spending getting underway and fiscal consolidation in prospect. Also, while the exchange rate is noticeably lower than a year ago, it remains high and commodity prices have declined further over recent months. The outlook is uncertain but as currently assessed suggests that a degree of spare capacity will be present for much of the forecast period.

"Given that assessment, the **Board**'s view is that the current accommodative monetary policy setting is likely to be appropriate for some time yet".

*ENV/APA/Other: Counter bid by Cheung Kong Group for \$1.32 cash

Envestra announced after market close on May 7 it received an indicative non binding takeover proposal to acquire all of Envestra's shares for a cash consideration of \$1.32 per Envestra share, from a consortium comprising Cheung Kong (Holdings) Ltd, Cheung Kong Infrastructure Holdings Ltd and Power Assets Holdings Ltd, each of which is a member of the Cheung Kong **Group**.

Cheung Kong Infrastructure Holdings (Malaysian) Ltd currently holds 17.46% of Envestra shares.

Minimum condition is more than 50% by number of Envestra shares, including CKI's current 17.46% interest.

Subject to the usual conditions and FIRB approval. Cheung Kong does not expect the ACCC approval to be a condition to an offer. (May 8)

*IAG: Fitch has announced it is ceasing coverage of Insurance Australia **Group** Fitch announced it will cease coverage of IAG's main operating subsidiaries on or around June 9 for business reasons. The Insurer Financial Strength Ratings (IFS) of Insurance Australia Limited and IAG (NZ) Limited are currently 'AA-'. The Outlook is Stable. Fitch reserves the right in its sole discretion to withdraw or maintain any rating at any time for any reason it deems sufficient. Fitch believes that investors benefit from increased rating coverage by Fitch and is providing approximately 30 days' notice to the market on the withdrawal of IAG's main insurance subsidiaries' ratings as a courtesy. Fitch's latest rating action on the issuers took place on 16 December 2013, whereby Fitch affirmed its ratings of IAG's main insurance subsidiaries.

Market Cap \$13.56b.

IAG down 2 cents to \$5.79

*JBH: To buy back 1.438 mln shares to offset exercise of employee options

JB Hi-Fi Ltd advised it intends to undertake an on market share buyback of up to 1.438 million shares or 1.4% of shares on issue at a cash cost of around \$27.2 million, based on yesterday's closing share price, to offset the dilutionary impact of shares issued in 2014 pursuant to the exercise of employee shae options.

The buyback will take place between May 26 and June 30.

JBH will also consider further initiatives as part of its ongoing capital management strategy. JBH will engage Macquarie Securities (Australia) Ltd to undertake the buyback.

Market Cap \$1.95b.

JBH up 53 cents to \$19.47

*NWS: News Corp net income down in 3rd qtr but up on f/casts

News Corporation last night reported net income in the quarter through March came to \$US48 million, or 8USc per share, down from \$US323 million, or 56 US c per share, a year ago. Last year, News Corp had booked a gain on the sale of its stake in New Zealand pay TV operator Sky Network.

Excluding that and other items, adjusted earnings fell two cents to 11US c per share vs 2US c expected.

Revenue for the quarter fell 5% to \$US2.08 billion, vs \$US2.07 billion expected.

Market Cap \$379m

NWS up 54 cents to \$18.29

*REA: EBITDA, revenue strongly higher for 9 months vs pcp

REA **Group** Ltd advised year to date financial information for REA was released by News Corp in its report for three and 9 months today (NWS has 61.6% of REA **Group**).

For the 9 months REA segment EBITDA was \$A162 million vs \$A117 million last year on revenue worth \$318 million vs \$244 million for the previous corresponding period (pcp).

Free cash flow was \$107 million vs 85 million for the pcp.

REA Group Chairman Hamish McLennan said in the report revenue growth of 30% and EBITDA growth of 38% over the prior corresponding period demonstrates the strength of the business.

Market Cap \$6b. REA down \$1.11 to \$45.76

*HDX: New contract for on mine grade control at Solomon Hub

Hughes Drilling Ltd announced said since commencing a three year contract for on mine grade control at Fortescue Metals **Group**'s Christmas Creek mine in September 2013 using three grade control drills, JSW

and their Aboriginal j/v partners Eastern Guruma have secured a new contract for on mine grade control drilling at Fortescue's Solomon Hub mines.

The new contract commenced using three drills and is ramping up to five grade control drills with several of the drills operating double shifts.

The j/v has 30% Aboriginal employment participation on both Fortescue Grade Control contracts, and follows the Chamber of Commerce and Industry of WA's award to JSW for excellence in indigenous training.

Market Cap \$50m.

HDX up 1.5 to 24 cents

*PRR: Fast track from FDA in orphan drug designation for Cvac

Prima BioMed Ltd announced the US FDA has granted Fast Track Designation to the Cvac clinical development program at Prima. This program is intended to improve overall survival in patients with relapsed with relapsed platinum-sensitive epithelial ovarian cancer who enter a second complete remission. Prima will work closely with the FDA in accelerating its development program for Cvac to potentially bring this treatment option to patients in the US.

Market Cap \$59m.

PRR up 1.2 to 4.8 cents

*RDF: Expects loss in 2nd half and for yr, EBITDA to be up/outlook cautious

Redflex Holdings Ltd advised following an evaluation of its strategic growth options by global consulting firm LEK, the company has engaged Canaccord Genuity Corp to assist with the identification of strategic opportunities.

Also Redflex has engaged a leading recruitment firm to assist in the search for a CEO.

Full year results update

The company said following guidance at the half year that the company expected the second half results to be break even at best on a profit before tax basis, the company now expects a loss before tax of between \$7/9 million for the second half, with positive EBITDA of \$5/7 million for the second half.

The full year loss before tax is expected to be \$2/4 million with positive EBITDA of \$25/27 million.

Conditions within the US market continue to be difficult and Redflex is currently experiencing a higher than normal number of cities choosing not to renew their programs - no intersections have been lost to competitors, cities have just decided not to continue with enforcement programs.

The resultant reduction in cameras and associated asset writedowns together with a lack of new installations has negatively impacted the **group**'s US revenue base and profitability. The Chicago program was also completed in February, resulting in reduced revenue going forward.

During the second half of this financial year, Redflex will incur non recurring costs of approximately \$2.3 **million** on payouts for the strategy work, engagement of Canaccord Genuity and follow up actions. Also there was adverse weather in the US for a period that significantly reduced traffic volumes and traffic violations for an extended period of time.

Market Cap \$109m.

RDF down 3 to 98 cents

*TFC: Adam Gilchrist resigns as director, continues as global ambassador

TFS Corporation Ltd announced Adam Gilchrist will resign as a director due to his increasing media and other professional commitments. He will continue as global ambassador for TFS, a position he has held since June 2010.

The chairman Patrick O'Connor paid tribute.

Mr Gilchrist said he has been an investor and shareholder in TFS Corp for almost 14 years, and he has no doubt the business is extremely well positioned to capitalise on future opportunities.

Market Cap \$502m.

TFC down 5 cents to \$1.78

*FNT: Swit Kia (formerly Suguma) project in PNG initial drilling

Frontier Resources Ltd announced the April 1st 2014 program exploring for high grade **gold** mineralisation at the Swit Kia Prospect (formerly Suguma) PNG was completed in late April.

Chairman and managing director Peter McNeil Mc said the report mineralised outcrops in the Swit Kia area were located, cleaned and systematically sampled as possible. The local geology, structure and orientation of the **gold** mineralisation is now much better understood.

The relationship between the Upper and Lower Zones is not well understood. The intensity of brecciation and alteration in the Upper Zone suggests it is closer to the major mineralising conduit, whereas the Lower Zone has significant widths of more passive conformable mineralisation.

Market Cap \$3.9m

FNT up 0.5 to 1.2 cents

*SFX: Placement at 81c raises \$11.5mln/PFS, DFS for 1st min sands in 2017

Mineral sands developer Sheffield Resources Ltd advised it has resolved to raise up to \$11.5 million through a placement of up to 14.2 million shares at an issue price of 81c per share to sophisticated and professional investors. The placement follows the release on April 14 of the Thunderbird Scoping Study results that highlighted the project's large scale, long life and exceptional financial returns.

Hartleys Ltd, Sheffield's corporate adviser, is broker to the offer.

Managing director Bruce McQuitty said in the report the **company** was very pleased with the strong demand for the capital raising, Sheffield will have a robust balance sheet to deliver on its milestones - the **company** expects to deliver the Thunderbird pre feasibility study in first quarter 2015 followed by the DFS, for a target of initial production in 2017.

Subject to shareholder approval, directors have committed to contribute \$320,000 to the placement.

Market Cap \$111m.
